

Haralick: image 计算? GLCM $\rightarrow$ feature
image size $\neq$ GLCM size

LBP: rotation-invariant
multi-resolution
scale $\checkmark$

SIFT: scale: 多尺度的 Gaussian $\Rightarrow$ scale space
相减 $\rightarrow$ DoG $\rightarrow$ maxima/minima
rotation/orientation: kp $\rightarrow$ gradient histogram
main orientation $\rightarrow$ rotate

robust to affine, 鲁棒但不是“不变”

MVDR: $A \rightarrow B$ 附近 $\Rightarrow$ A点不适合做匹配
 $\rightarrow C$ 附近 因为可能是常见点

complexity $\uparrow \Rightarrow \#kps \uparrow \Rightarrow$ dimension (image)
Matrix $\uparrow$
kps 维度不变

RANSAC: 从有 outliers 数据中
提取 inliers $\Rightarrow$ model
(loop, iteration)

Bow 可变特征 $\Rightarrow$ 固定维度

KNN: 每个 kp $\rightarrow$ A closest cluster
(distance/similarity)

count 计算每个 vocab 中 #kps $\rightarrow$ 频数 $[1 \times K]$

training set $\swarrow$ construct

为什么 pixels

{ change illumination
viewpoint
redundant

Shape: extract after image segmentation
 $\times$ viewpoint/illumination

{ compact: S 与 "P" 相同 圆 in S 之中
circularity: $\frac{4\pi S}{P^2}$
eccentricity: 无左右对称“环” $\Rightarrow$ 圆

HOG: { Object detection
无 Segmentation
gradient histogram (与 SIFT 类似)
 $\downarrow$
Cell $\rightarrow$ block $\rightarrow$ window
Conc
Response Map
